

YOU'RE INVITED

CPIN Math Professional Learning Institute

Join us for a powerful two-day institute to learn the latest research from Dr. Douglas Clements and become certified to train on the new STEM module for administrators .

Research speaker, Dr. Douglas Clements, will share new research that aligns directly to preschool learning foundations and strategies in the curriculum framework. Participants will have an opportunity to ask Dr. Clements questions and discuss new information with their colleagues.

Participants will receive training on the newest integrated STEM module that is designed to help administrators support integrated STEM environments with California Department of Education resources including the preschool learning foundations, curriculum frameworks and *Best Practices for Planning Curriculum for Young Children: The Integrated Nature of Learning*.

- IN ADDITION, PARTICIPANTS WILL...
- Enhance knowledge of math resources that support the seven math and STEM modules
 - Discover and apply adult learning competencies to existing CPIN math modules
 - Explore relationship-based strategies for extended learning beyond the CPIN math trainings through technical assistance

I never knew that I could utilize the preschool curriculum framework strategies to show teachers the connection between their everyday interactions with children and STEM concepts, so they don't feel like STEM is something new. Rather, STEM is just a new name for what they are already doing with children.

– Administrator Participant Pilot Supporting Integrated STEM Training
